Maximize Product Display and Appeal with Stretch Pak from Knight Packaging Group

When you want people to really see your product, choose Stretch Pak from Knight Packaging Group, Inc., an industry leader in specialty custom-printed packaging solutions. Stretch Pak gives added visual dimension to retail carded packaging, allowing you to display your products completely, front and back.

Highly popular for its appeal and durability, Stretch Pak showcases your products in full view behind a thin but ultra-tough window film. What's more, Stretch Pak easily lends itself to enhancements such as embossing, UV coating and hot foil stamping. The cards are tamper-evident and can conceal a security feature such as a checkpoint sticker.

Experience the Benefits of Stretch Pak:

Product Visibility – Products can be seen from all sides. Product information and marketing messages won't obstruct product view.

Display Flexibility – Stretch Pak cards can hang or stand. Multiple products can be packaged together for promotions.

Tamper-Proof – Stretch Pak seals products tightly.

Product Protection – Stretch Pak holds product tightly – no rattling or spilling. And Stretch Pak safeguards against moisture, dust, handling and other contaminants.

Product Appeal – Cards print with high-quality graphics and high clarity and gloss.

Volume Flexibility – Due to the wide variety of our printing equipment, Knight has a unique capability to produce both large and small orders. No order is either too large or too small for us.

HOW STRETCH PAK WORKS:

- We print Stretch Pak cards to your exact specifications.
- A heat seal coating is applied to the back of the card before die-cutting and windowing.
- Our automated Stretch Pak machine feeds cards from the supply hopper.
- The film is pre-heated and a vacuum action forms a pocket for your product.
- Your product is inserted into the pocket, cards are folded and di-electrically sealed.
- A bath of warm air activates the film memory to shrink it tightly around your product.
